MAIL DATE

DELIVERY MODE

05/29/2007

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/779,725	Applicant(s) GUERET, JEAN-LOUIS	
	Examiner Rachel A. Running	Art Unit 3732	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 07 March 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-27,29-32 and 34-42 is/are pending in the application.
- 4a) Of the above claim(s) 28 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-27,29-32 and 34-42 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-6, 10-18, 20, 23, 25-27, 30, 34, and 37-42 are rejected under 35 U.S.C. 102(b) as being anticipated by Stange (DE 296 14 364).

Stange discloses an applicator comprising a base portion (2) carrying an applicator element (4) capable of fixing onto a receptacle (see Figures 1 and 2); and a handle portion (3) rotably mounted on the base portion to turn about a fixed axis of rotation, wherein the axis of rotation and the longitudinal axis of the handle portion are not mutually perpendicular (see Figures 2 and 3). The axis of rotation and the longitudinal axis are not parallel, and the axis of rotation and an axis of the base are never mutually perpendicular. The base portion and the handle portion co-operate to enable a user to secure the handle portion in at least two predefined position relative to the base (see Figures 2 and 3). The handle portion (12) and the base portion (11) co-operate to produce a click sound (see Figure 2). At least one of the base portion and the handle portion has a relief (5), which allows the base portion and the handle portion to provide a good grip (see Figure 1). The base portion includes a surface that is inclined relative to the axis of the base portion and the axis of rotation extends substantially orthogonally to the inclined surface (see Figure 2). At least one of the base

portion and the handle portion includes a pin (9), which is engaged in a housing in the base portion (see Figure 2). The handle portion includes an insert (10) that enables the handle portion to be fixed onto the base portion by snap-fastening (see Figure 2). The applicator includes a stem having a first end which comprises a brush (4) and a second end (see Figure 2).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-5, 7-18, 20, 23, 25-27, 30-32, and 34-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vasas (US 6,237,609) in view of Stange.

Vasas discloses an applicator comprising a base portion carrying an applicator element (12) fixed onto a receptacle (10) and a handle portion (26) mounted on the base portion (see Figure 1; column 3, lines 45-55). The handle portion has a longitudinally axis. The base portion comprises a closure cap for the receptacle and the base portion is fixed onto the neck of the receptacle by screwing (see Figure 1; column 3, lines 59-65). The applicator comprises a brush (50) with a non-rectilinear core (see Figure 1; column 4, lines 30-33). The receptacle includes a wiper member (20)

Art Unit: 3732

arranged to wipe the applicator element while the applicator is being removed (see Figure 1; column 3, lines 45-50). The applicator is configured for applying a product on at least one of the lips, eyelids, eyelashes, eyebrows, and hairs of the user.

Vasas does not disclose the handle portion rotatably mounted on the base portion to turn about a fixed axis of rotation, wherein the axis of rotation and the longitudinal axis of the handle portion are not mutually perpendicular. Stange teaches a base portion (2) carrying an applicator element (4) and a handle portion (3) rotably mounted on the base portion to turn about a fixed axis of rotation, wherein the axis of rotation and the longitudinal axis of the handle portion are not mutually perpendicular (see Figures 2 and 3). The axis of rotation and the longitudinal axis are not parallel, and the axis of rotation and an axis of the base are not mutually perpendicular. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the base and handle portion of Vasas with the handle portion rotatably mounted on the base portion to turn about a fixed axis of rotation wherein the axis of rotation and the longitudinal axis of the handle are not mutually perpendicular as taught by Stange to provide the user with an advanced ergonomic handle that allows the user to use multiple angles of tilt while applying mascara.

5. Claims 7-9, 31, 32, and 35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stange in view of Shay (US 397,028).

Art Unit: 3732

Stange discloses the claimed invention except for the base portion comprising a closure cap for a receptacle, the base portion being arranged to be fixed onto a neck of a receptacle by snap fitting, and the fixing means are leaktight.

Shay teaches the base portion of a shaving brush (4) comprising a closure cap for a receptacle (1). The base portion is arranged to be fixed to the receptacle by screwing and is leaktight (see Figure 2; column 2, lines 65-70). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the shaving brush of Stange to be fixed onto a receptacle as taught by Shay to provide the user with a shaving mug having a convenient means to suspend the brush when not in use.

6. Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Stange in view of Yamada (U.S. Patent No. 5,815,875).

Stange discloses the claimed invention except for the pin being a split pin. Yamada teaches a split pin which secures a handle to base (see Figure 4 and 5; column 2, lines 40-50). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have the pin of Stange be a split pin as taught by Yamada in order to allow the pin to fit into the hollow of the base and then lock into place by expanding.

7. Claim 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over Stange.

Art Unit: 3732

Stange discloses the base portion including a pin arranged to be snap-fastened into the corresponding opening in the handle portion instead of the handle portion including a pin arranged to be snap-fastened into a corresponding opening in the base portion.

It would have been obvious to one having ordinary skill in the art at the time the invention was made have the handle portion include a pin arranged to be snap-fastened into a corresponding opening in the base portion, since it has been held that rearranging parts of an invention involves only routine skill in the art. In re Japikse, 86 USPQ 70.

8. Claim 22 is rejected under 35 U.S.C. 103(a) as being unpatentable over Stange in view of Riemann (U.S. Patent No. 4,922,575).

Stange discloses the claimed invention except for the handle portion including fins and a body to which the fins are attached.

Riemann teaches having fins (24b) on a handle portion (see Figure 9; column 1, lines 55-60). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the handle portion of Stange with fins as taught by Riemann to provide the mechanical advantage of torque and improved gripping.

9. Claim 24 is rejected under 35 U.S.C. 103(a) as being unpatentable over Stange in view of Kingsford (U.S. Patent No. 5,137,038).

Art Unit: 3732

Stange discloses the claimed invention except for the base portion and handle portion including at least one marker and the other base portion and handle portion including an index.

Kingsford teaches having a base portion with an index (6) and a handle portion with a marker (5) (see Figures 1 and 2; column 3, lines 10-15). It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the handle and base of Stange with an index and maker as taught by Kingsford in order to allow the user to move the handle and base to the next position by aligning the maker and index.

10. Claim 29 is rejected under 35 U.S.C. 103(a) as being unpatentable over Stange in view of Samaras et al. (U.S. Patent No. 3,164,856).

Stange discloses the claimed invention except for the applicator element being removable from the base portion.

Samaras et al. teach an interchangeable applicator portion (see Figure 1; column 3, lines 1-10). It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the applicator portion of Stange be removable as taught by Samaras et al. in order to allow the user to interchange the brushes in order to allow a different user to use a different applicator.

Response to Arguments

11. Applicant's arguments filed March 7, 2007 have been fully considered but they are not persuasive.

12. In response to applicant's arguments that the longitudinal axis of the handle portion are never mutually perpendicular, page 1 Stange's English translation (submitted by Applicant) states that "The separation of the two grip sections runs at an angle of 10° to 60°, preferably 45° to the base of the grip." Therefore, it is understood that although 45° is shown in the drawings and is preferred, the angle can be 10° to 60°. With the angle 10° the axis of rotation and the longitudinal axis of the handle portion will never be mutually perpendicular. It is to be noted that a reference is not limited to its preferred embodiment. In re Boe, 148 USPQ 507 (CCPA 1966).

13. In response to Applicant's argument that Strange is not configured to be fixed onto a receptacle as recited in claim 1, the intended use statement "configured for" is not given weight in an article claim. The applicator of Strange could be fixed to a receptacle and thus is deemed to be so "configured".

14. In response to Applicant's argument that Stange is not configured for applying the product to the lips, eyelids, and eyelashes, as discussed above the intended use statement "configured for" is not given weight in an article claim. The applicator element could apply the product to one of lips, eyelids, and eyelashes, and thus is deemed to be so "configured".

Conclusion

15. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

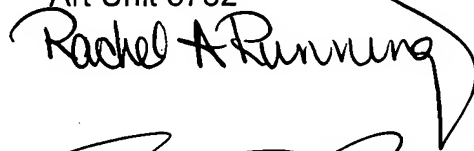

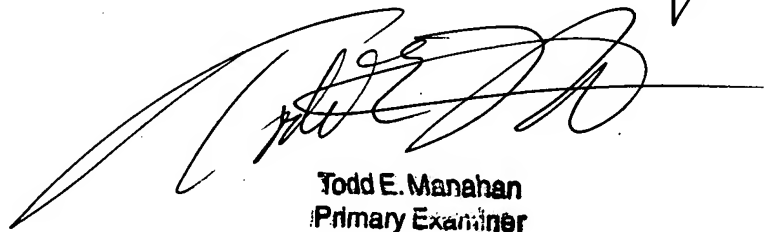

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rachel A. Running whose telephone number is (571) 272-1917. The examiner can normally be reached on Monday-Friday 7:00 am - 4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cris Rodriguez can be reached on (571) 272-4964. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
